

## How to turn the safety on/off for YouTube and Google

### 1. Set up a Google Account.

This can be done by clicking on the sign in button on the google homepage and following the prompts to set up a new account.

This needs to be completed before you can set up any safety settings on Youtube or Google

#### A. Setting the Safety on You tube

- On some devices you simply go to YouTube and scroll to the bottom of any page and it will have a box which looks like this.

Safety: off ▼

- Click the triangle and the **off** will become **on**.
- Click on [lock safety mode on this browser](#). You will need to insert your Google password from setting up your account to do this.
- You should get a message confirming safety mode has been successfully locked.

Alternatively, scroll back to the bottom and check the safety is now on.

- If it is not on try again, sometimes it takes a few times to work.

*Faith & Trust*

- Check occasionally to see if it is still activated as it sometimes turns itself off.
- And remember to sign out of your google account when done so no-one can mess with it.

**B. Alternative for Setting the safety on YouTube**

- If the above version does not work try this way
- Open YouTube.
- Click on the three lines from the following diagram.

- Click on the settings scroll.

- Click on the safety mode until **on** is displayed.

Once the safety settings are activated on YouTube they should be activated on Google as well. Please note this only covers this particular search engine.
